

# Principles of AR/VR Design

# Goals

1. Design principles by category

# Design Principles

1. Visual
2. UI/UX
3. Locomotion
4. Sound
5. Social
6. Presence
7. Core Ideas

# Visual

## Realism is not super important

## Create “world rules” and follow them

- Any world can be immersive, as long as its consistent
  - Build trust between the user and the world

## Consider POV

**UI/UX**

You don't need to mimic real life

## Make use of 3D space

- Don't be restricted by 2D design paradigms, and think outside the square.

## Don't tire out the user

- Every movement has an energy cost
- Make frequent actions easy to do

## World space vs screen space

- World space: exist as objects in the environment (diegetic)
- Screen space: attached to the user's perspective (non-diegetic)

# Locomotion

## Avoid acceleration

*Users feel changes in velocity, not velocity itself.*

## Reference frames can help

# Presence

## Never forget emulation promises...

- Never forget your emulation of sense → don't betray your user without intent (Hand Emulation)

## Uncanny valley

- An approximation of realism is sometimes *worse* than a fictional parody

## *Feeling good > Feeling real*

- Missing thrown snowballs 90% of the time might be realistic... but not fun

## Avatars?

- Physical avatars can dramatically *help or hurt* presence - depends on execution

# Sound

## Sound FX add a LOT to a game

# Social

**Good 'multiplayer' is great**

## Make sure 'multiplayer' is meaningful

- A bad social experience is worse than no social experience at all
  - The stakes are higher in VR

## Consider giving players “safety bubble”

# Core Ideas

## Take advantage of virtual reality

- Ask yourself: what will VR do for your application?

## Additional Things to Keep in Mind for XR Design

- Make Onboarding Simple
- Keep It Predictable
- Leave Clues
- Make the Experience Useful
- Delight the User, but Keep them Grounded
- Design for a Diverse Set of Users

# Conclusion

- Use these as guidelines to motivate your own explorations
  - ▷ Learn from developers' past experiences
  - ▷ **Not** hard and fast truths
  - ▷ **Not** all-encompassing
  - ▷ **Lots** of open questions
- Be creative, and have fun!

## Administrivia

- **HW5** has been officially assigned, due **night of next class**
  - ▷ Learning Unity physics and raycasting
  - ▷ Find it on the class website!
- **LAB 4**
  - ▷ [xr.berkeley.edu/decal/](http://xr.berkeley.edu/decal/)
